

# Northern Lights Autoflower Canada - Drying cannabis on a rack

VISIT OUR STORE: <https://t.co/G33OKiBKCS>

Northern Lights Autoflowering seeds produce small, squat plants with similar characteristics to the well known feminized Cannabis variety. An Indica dominant strain, it produces large, dense, colorful buds with a heavy coating of thick resin. Easy to grow, Northern Lights Autoflowering seeds are perfect for cultivating both indoor, and outdoors. Northern Lights Autoflower Characteristics. Northern Lights Auto contains a 23% THC level. It is highly flexible to any growing environment, whether it is indoor or outdoor. When grown indoors, the height of this strain can reach small to medium size, around 120cm. I harvested first thing in the morning before the lights went back on. I read you can save the terps by

harvesting before the light burns them off. Can anyone confirm/deny this?

Our team has carefully curated a selection of strains most suitable for our northern climate. All our seeds are feminized as well as autoflower which is what you need to grow outdoors in Canada's short summer. It is our aim to deliver a product held to the highest standard and we stand by that, we guarantee 9/10 seeds to germinate. Northern Lights Autoflower is one of the famous cannabis strains in the world. It has the best characteristics of being an auto-flowering seed. Northern Light auto-flower is mostly an Indica hybrid that contains 15.08 percent THC, just enough to offer a narcotic effect.
