

How to select the best tire for your vehicle

A good suitable tire is as important as the safety features of a car. Finding the best suitable one for your car is not quite easy. But don't worry. This guide by [Eric Von Schledorn in Milwaukee, WI](#), will help you understand what you need to keep in mind to get the best tire for your vehicle. You deserve a tire that is going to last for the longest time. Of Course, you just don't want to spend your hard-earned money on something that is not worthy. So, before getting your hand on the tire you need to ask yourself some questions. Here are some tricks which will help you to find how to select the best tire for your vehicle.

1. What is your favorite tread pattern?
2. What type of tire do you want for your vehicle?
3. What speed rating goes best with you?
4. Does warranty and manufacturing date make a difference?

What is your favorite tread pattern?

1. Asymmetrical Tread

- If you are one of those who just love to live every second you may need this type of tread pattern for your tire. This tread is usually used on sports cars. The inner and outer side of these tires is equipped with multiple tread patterns. The inside of the tread helps to remove water. On the other hand, the outer side of this tread helps to grip cornering for prolonged corners of the road.

2. Symmetrical Tread

If you use your vehicle for everyday use you should go for normal road cars. An asymmetrical tread pattern is designed for these types of cars. They are generally very long-lasting even after so rough use. This type of tire tread is very cost-friendly, unlike others.

3. Directional Tread

This type of tire tread works to remove water when they are rotated in a specific direction.

What type of tire do you want?

Tube-type Or Tubeless

Two types of tires are most hyped in the market. You should use tubeless over tube-type tires.

1. Tubeless ones are much more equipped with advanced and safety features and are very easy to fix. The wheels are generally made of alloy and alloy goes best with tubeless ones.

2. In case your vehicle has a steel rim then you should use a tire with a tube. It will save you some money.

What Speed Rating goes best with you?

The speed rating is very important for your vehicle. If your tire label is P167/59R15/H, then H is your speed rating. It is enlisted with alpha-numeric code.

Speed Chart

Q - 160 km/h

S - 180 km/h

T - 190 km/h

U - 200 km/h
H - 210 km/h
V - 240 km/h
W - 270 km/h
Y - 300 km/h
(Y) - Above 300 km/h

Here's how to read the most important data printed on your tire's sidewall. [click here.](#)

Does warranty and manufacturing date make a difference?

A little peace of mind and a sense of security makes a customer have a long-lasting impression on them. Many companies do that to gain trust in us. Generally, if your tire gets torn before the guaranteed warranty time, you will get a free replacement.

Checking your manufacturing date is as important as finding the best tread tire for your vehicle.

A car tire is made up of a rubber-based compound. If you just keep it sitting idle the rubber quality decreases. It overall affects the gripping control of your vehicle. So it is very important to search for the manufacturer by yourself. You should take other people's opinion and try to find a renowned manufacturer company. They will provide high-standard products that will make the whole scenario a lot better.

If you think about your switch, be sure to check our exclusive tire collections, especially if you are seeking maximum all-weather grip and tread life. Many manufacturers have websites on their own, so consumers get enough time to research what is best for them. So here is the full list to give you an idea about anything and everything on selecting the best tire for your vehicle. To make things further convenient, you can visit our inventory.

Keep shopping Guys.
