

Human Growth Hormone Youth - Human growth hormone (HGH): Does it slow aging? - Mayo Clinic

Growth hormone fuels childhood growth and helps maintain tissues and organs throughout its life. It's produced by the pea-sized pituitary gland — located at the base of the brain. Beginning in middle age, however, the pituitary gland slowly reduces the amount of growth hormone it produces.

World

HGH (human growth hormone) has been dubbed the "fountain of youth hormone" for good reason: Research suggests that it helps boost fat burn and protect muscle health! But, your body's HGH production dips up to 50 percent by your And while sermorelin injections could help, they can have side effects such as pain, redness, and

HGH (Human Growth Hormone): Effects on Aging, Other Uses, Contraindications

U.S. Patent June 13, 1995 Sheet 2 of 5 5,424,199

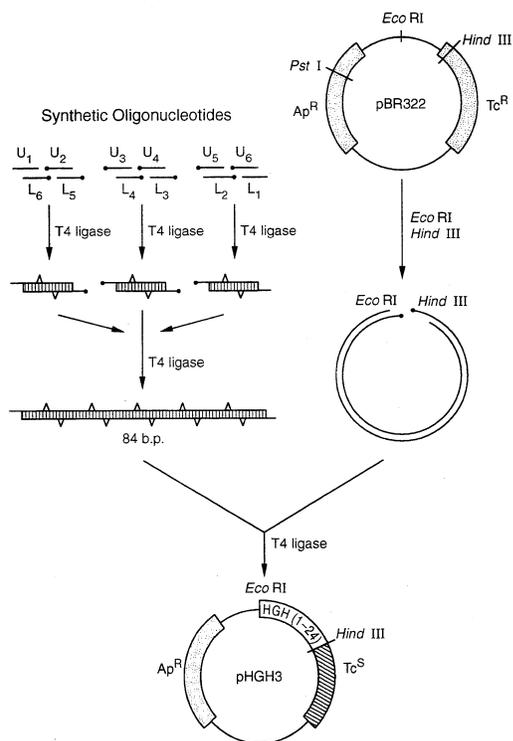

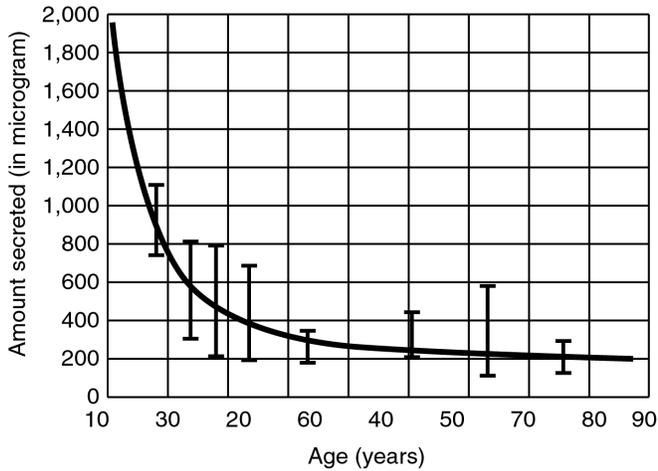

FIG..2

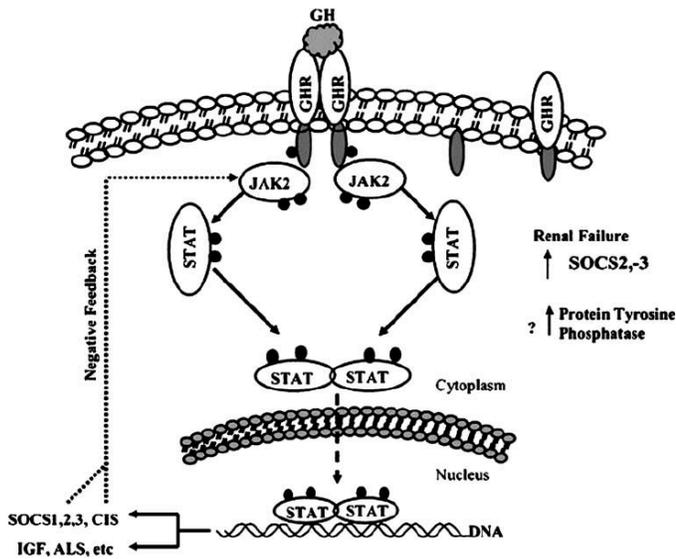

During childhood, the primary role of HGH (human growth hormone) is to stimulate bone and tissue. It activates the epiphyseal plates in bones which allow bone to grow. It also triggers

Growth Hormone Decline

Growth hormone fuels childhood growth and helps maintain tissues and organs throughout its life. It's produced by the pea-sized pituitary gland located at the base of the brain. Beginning in middle age, however, the pituitary gland slowly reduces the amount of growth hormone it produces.

The "Other" Hormones - Renew Youth

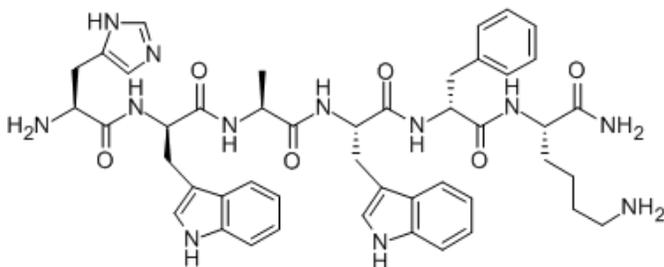

The human body produces ample growth hormone when people are young and growing. However, upon reaching adulthood, growth hormone production drops off. After age 30, the human body produces 10-15% less GH with each passing year. By the 70s or 80s, the body produces just a fraction of what was produced in childhood.
